PROFESSIONAL SUMMARY

From SaaS to mobile apps, I've spent my career stepping into complex environments, learning them quickly, and doing whatever moves them forward: owning product, driving delivery, building process, and running operations. Today I lead a live AI product with paying customers, and I shape my role around what an organization needs most.

CORE SKILLS

Learning complex domains fast • End-to-end execution ownership • Delivery at scale across many parallel tracks • Cross-functional alignment • Data-informed decision-making • AI products and agentic systems in production • Leading and mentoring teams

EXPERIENCE

Psychometric Test Simulator | Co-Founder & Product Lead | 2026 - Present

- Co-building a psychometric learning website and app, live with paying customers. I own the AI system design and quality layer: a pipeline of AI agents that generate, solve, explain, and QA-validate exam questions against a standard I define.
- Built the product from the ground up: planned the roadmap and priorities, designed the learner-facing study experience, and shaped the practice flow students use.

Fitness22 | Product Operations Manager | 2023 - 2026

- Acted as the CEO's operational counterpart, taking ownership of day-to-day execution processes and enabling leadership to focus on company strategy and organizational scaling.
- Owned and improved the company's end-to-end operating process, creating clearer planning, execution, delivery tracking, and cross-team collaboration.
- Scaled product delivery operations from 2 parallel release tracks to 8 simultaneous releases while improving execution predictability from planning overruns of up to 230% to a maximum of 130%.
- Independently led the company-wide end-to-end implementation of Jira, replacing outdated legacy project management tools, enabling development teams to leverage AI agents for release planning and execution workflows.

S.E.S Education | Project Manager | 2019 - 2023

- Led the digital transformation of a legacy hardware-based EdTech platform into an integrated hardware and SaaS learning ecosystem serving multiple customer personas.
- Converted a 32-course curriculum into a scalable self-guided digital learning model.

Kidum Education | Project Manager & Team Lead | 2015 - 2019

- Managed a team of 10 instructors while leading high-performance educational programs.
- Built operational tracking systems, evaluated LMS platforms, produced online learning content, and designed and implemented a new student admission process that significantly reduced participant churn.

EDUCATION & LANGUAGES

Tel Aviv University - M.A. in Science Education, specializing in Mathematics Education
Ben-Gurion University - B.A. in Economics, Politics & Government
Reforge: Product Management Foundations (coursework)
Languages: Hebrew (Native) | English (Professional Proficiency)
